HOW TO READ HTML FILE ON GITHUB?

Adding the prefix http://htmlpreview.github.io/? does the trick.

That is, if you point the browser to your html file in the github gui, let's say

$$https://github.com/[account]/[repo]/blob/master/[report-file].html$$

then just add prefix $http://htmlpreview.github.io/?$ and make it read

$$http://htmlpreview.github.io/?\,https://github.com/[account]/[repo]/blob/master/[file].html$$

and you'll be able to see the rendered html file.
